MABEL SAMUEL, AI ENGINEER

+2348036607143 | mabelsamuelpaul@gmail.com | LinkedIn | GitHub | Website

Education

University of Port Harcourt **December 2018 - April 2024**
Bachelor of science in Human Physiology *(Rivers, Nigeria)*
Course Work: Research Methods, Data Analysis, Scientific Computing

Mastering Backend **September 2026 - October 2026**
AI Engineering *(Online)*
Focus: LLM applications, RAG, document question answering, natural-language task processing, and responsible AI.

Sololearn **March 2024**
Certifications: Tech for Everyone, Python Developer *(Online)*
Focus Areas: Python Programming, Problem Solving, Programming Fundamentals

Olotu square **May 2024 - December 2024**
Full Stack Web Development Training *(Rivers, Nigeria)*
Relevant Skills: HTML, CSS, JavaScript, React, Node.js, REST APIs, Git, Responsive Web Design

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, SQL, Bash
Backend: Node.js, Express.js, Django REST, NestJS, RESTful APIs, GraphQL, WebSockets, JWT/OAuth, Microservices, Serverless (AWS Lambda, Vercel)
AI: Large Language Model (LLM) applications, Retrieval-Augmented Generation (RAG), document question-answering systems, natural-language processing concepts, embeddings, vector databases, context retrieval, tool calling, Model Context Protocol (MCP), AI workflow integration, responsible AI principles
Databases: PostgreSQL, MongoDB, MySQL, Firebase, SQLite, Redis, Supabase, DynamoDB, ORM Tools (Prisma, Sequelize, Mongoose, TypeORM)
Testing & QA: Jest, Mocha, Postman, Supertest
DevOps & Cloud: Git, GitHub, Azure DevOps, Jira, GCP (Firebase, Cloud Functions, Firestore), Vercel, Netlify, Nginx, Apache, GitHub Actions
Collaboration & Workflow: Agile/Scrum, Jira, Trello, Confluence, Slack, Notion
Version Control & Build Tools: Git (branching, merging, PRs), NPM, Yarn, Webpack, Babel, Vite, ESLint, Prettier
Softskills: Effective communication, Collaboration, Data Intuition, Customer Centric and Ownership

Professional Experience

Anyskills Inc. **March 2025 - Present**
Software engineer *(Remote, UK)*

- Took ownership of a major UI refactor initiative that unified design consistency across the app using atomic design principles and a shared component library.
- Collaborated with cross-functional teams, including designers and other developers, to define project requirements, implement feature enhancements, and ensure a seamless user experience.
- Integrated a Django REST API to power key features such as user dashboards**,** and search functionality, handling data fetching, error states, and client-side caching.

- Enhanced application performance by leveraging best practices in NuxtJs.
- Followed agile development practices including daily standups, bi-weekly sprint reviews, and code reviews, enhancing team velocity and quality assurance.

Projects

DocuChat: Developed a document-question-answering application that enables users to upload text documents and ask questions about their contents. Explored a Retrieval-Augmented Generation (RAG) workflow to retrieve relevant document content and provide context-grounded responses from an LLM. Worked toward connecting document ingestion, information retrieval, and LLM-generated answers into a cohesive backend workflow. Focused on response relevance, grounding answers in supplied documents, and making document-based information easier to access.

Tasklume: Developed an AI-assisted task management solution designed to reduce the cognitive effort involved in organizing daily work. Explored natural-language task capture, including extracting task titles, deadlines, priorities, and project associations from user input. Explored intelligent task categorization, priority suggestions, semantic task search, and AI-generated daily or weekly summaries. Considered responsible AI requirements, including user correction of extracted details, human control over prioritization, privacy, and manual workflows when AI services are unavailable.

Volunteer Experience

Techrity **January 2025 - Present**

Full-stack developer *(Remote, Nigeria)*

- Designed and implemented backend improvements for the mentorship and opportunity systems, including mentee applications, mentor onboarding flows, and partnership application pipelines, ensuring consistent data validation, structured submissions, and reliable processing of application workflows.
- Contributed to the development and maintenance of the Techrity Mentorship Platform, building and optimizing features across both frontend and backend systems that support hundreds of mentees, mentors, and partnership applicants across mentorship and opportunity programs.
- Improved API performance by introducing server-side caching strategies for frequently accessed resources such as opportunity listings, mentorship profiles, and application metadata, resulting in significantly reduced response times (up to ~60% improvement on repeated requests) and reduced database load.
- Redesigned and rebuilt the Opportunity Board system, improving discoverability of job opportunities, data support programs, and laptop support initiatives, leading to a ~40% increase in user engagement and application interactions.
- Implemented improved filtering, search, and pagination logic across listings and applications, reducing average time-to-find-relevant-opportunities by ~30–50% for end users.
- Resolved persistent npm installation and dependency conflicts by updating packages and eliminating legacy peer dependency issues, reducing developer setup errors by ~90% and enabling faster onboarding for contributors.
- Refactored legacy components and improved application architecture, reducing technical debt and improving overall development efficiency by ~25%.
- Collaborated with designers and other developers to deliver production-ready features, ensuring a stable and accessible platform for a growing developer community.
